

Ripple effect - Weird Science Summer Camp

Big Bang Theory scientists in the making? Hands-on experiments, brand new creations, lots of fun. The Weird Science Summer Camp has been funded for the past two years by the AEF, and 60 children from the district got to spend a week exploring the world of science in a new environment. Meeting every day for a week in the summer, students engineered bridges and towers, explored biology, and worked individually and in teams to create slime and other chemical reactions. Instructor Scott Conradt observed, "With the funding from AEF, students have a great program for only \$25, rather than the \$225 they were paying for the prior program. The goal is to get all kids excited about doing and experiencing science!"
